Fall planting and conservation go hand in hand. Looking over these special Fall offers will show savings of up to 50% on the cost of plant material. This is made possible by a longer season and more satisfactory weather conditions in the Fall. The use of regular year around employees in digging and handling, instead of extra help make these savings possible.

We are all interested in conserving gas and rubber and Fall planting effects real savings here too. Deliveries may be grouped better when the hectic rush of a short Spring does not exist. Delivery savings are often as much as 50%. Plant this Fall and save. Start early on Evergreens and Broadleaved Evergreens. Late Fall for Shrubs and Shade Trees.

Telephone orders will receive the same careful handling as personal selection and we will endeavor to interpret your orders to your entire satisfaction.

FRENCH HYBRID LILACS

Almost everybody knows and loves the old-fashioned purple Lilac, but only a few know how exquisitely lovely the French Hybrids are. They are just as easy to grow, and bloom when they are even younger. The flowers are relatively huge, and are borne in enormous clusters, sometimes six or seven clusters combined in one great truss. Here are eight favorite varieties which are so exquisitely lovely and different that you will want them all in the border as specimens.

Six of the best Hybrid Lilacs we know are listed below. Stock is bushy and well shaped.

Alphonse Lavalle.

Double blue. 3-4 ft., 4-5 ft.

Belle de Nancy.

Double satiny rose. 2-3 ft., 3-4 ft., 4-5 ft.

Mme. Lemoine.

Double pure white. 2-3 ft.

Marie Le Graye.

Fine, large single white. 2-3 ft.

Pres. Grevy.

Double blue. 2-3 ft., 4-5 ft.

Souv. de Ludwig Spaeth.

Large single reddish purple. 2-3 ft., 3-4 ft.

15 other varieties available in various sizes.

CHOICE PEONIES

Peonies are one of the most satisfactory perennial plant we grow. The tremendous number of blooms, the exquisite colors, the hardiness and ease of culture make Peonies an extra dividend investment.

August, September and October are the months to plant. Prepare the soil to a depth of 18 inches and mix in liberally, bonemeal and pulverized sheep manure. A light sprinkling of wood ash in early Spring is also desirable.

Plant so that the prominent eyes are 2 inches below the surface and firm soil well around the roots. Page 13 of our booklet "Planting Sketches" shows just how this is done and is a good reference for any type of planting. Your copy will be mailed for the asking.

Select from this list of choice varieties.
